SCALES FARE

IDENTITY HANDBOOK · V1.0

Brand Basics

The marks, the colours, the type, and the handful of rules that keep them looking like one company.

SCALES FARE
POINT OF SALE · JAMAICA

DESIGNED BY
YARDSCALE DIGITAL

01 · THE MARKS

One symbol, four lockups

A balance beam tipped twelve degrees, resting on a fulcrum: a scale that is rising rather than level. The gold pivot is the point of sale — the single moment everything in this business turns on. Reach for the horizontal lockup by default; the others exist for the places it will not fit.

Primary · scalesfare-logo-horizontal.svg

Reversed · -horizontal-reversed.svg

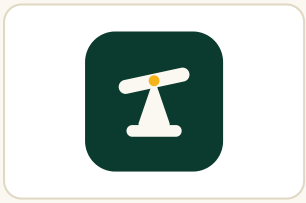

Stacked · -stacked.svg

With descriptor · -horizontal-tagline.svg

Symbol alone · scalesfare-symbol.svg

App tile · -symbol-tile.svg

Mono black · -mono-black.svg

Mono on gold

Mono white · -mono-white.svg

WHEN TO USE WHICH

Horizontal for anything wider than it is tall — websites, letterheads, vehicle doors, email signatures. **Stacked** where the space is square or narrow. **Symbol alone** only where the name is already present or obvious: app icons, social avatars, a stamp on a receipt.

02 · SPACE AND SIZE

Give it room, keep it legible

Define **X** as the cap height of the wordmark — the height of the letter S. Keep at least X clear on every side, free of type, images, rules and the edge of the page.

Minimum clear space on all four sides. More is always fine; less never is.

Smallest it should ever go

Horizontal · 130px

Stacked · 74px

Symbol · 22px

Favicon · 16px

BELOW THOSE SIZES

Drop the wordmark and use the symbol, or the tile version on a solid green ground. A wordmark too small to read is worse than no wordmark at all.

Five colours, and two do the work

Blue Mountain green carries almost everything. Pimento gold is the accent and belongs on the thing you want pressed — a button, a price, a single word. Use it sparingly enough that it still means something.

Blue Mountain

HEX #0B3B2E
RGB 11 · 59 · 46
CMYK 81 · 0 · 22 · 77

Primary. Backgrounds, the logo, body text on light grounds.

Pimento Gold

HEX #F4B41A
RGB 244 · 180 · 26
CMYK 0 · 26 · 89 · 4

Accent. Buttons, the pivot dot, one highlighted word. Never body text.

Jade

HEX #12A36B
RGB 18 · 163 · 107
CMYK 89 · 0 · 34 · 36

Secondary. Ticks, positive states, small labels. Support only.

Coconut

HEX #FBF8F1
RGB 251 · 248 · 241
CMYK 0 · 1 · 4 · 2

Paper. The default page. Warmer than white on purpose.

Coal

HEX #14120E
RGB 20 · 18 · 14
CMYK 0 · 10 · 30 · 92

Text on light grounds where green would be too soft.

The pairing

DARK Coconut & gold
LIGHT Green & coal
AVOID Gold on coconut

Gold on a light ground fails contrast for text. Keep it to shapes.

BEFORE ANYTHING GOES TO PRINT

The CMYK values above are a straight conversion, not a proofed build. Send your printer the hex values and ask them to match on their own profile — and ask for a proof of the green, which is the one that shifts.

04 · TYPE

Three faces, all free

All three are open-source and load from Google Fonts, so the brand costs nothing to run and anyone can pick it up. The wordmark itself is drawn from Sora ExtraBold and shipped as outlines — the logo files need no font installed.

DISPLAY · SORA · 700 & 800

Every sale, counted.

Headlines, the wordmark, buttons. Tight tracking at large sizes (−3 to −4.5%). Never below 600 weight — Sora goes limp when it is light.

BODY · INTER · 400, 500 & 600

Ring it up, bank it, know what you have left on the shelf — the till does the counting.

Everything you read in a paragraph. Line height 1.55–1.65. Set body copy at 16–17px on screen; do not go under 15px.

LABELS & FIGURES · JETBRAINS MONO · 500

POINT OF SALE · SETUP · SUPPORT

J$11,500 15% 02:14

Eyebrows, small caps labels, and every price or figure. Letterspace uppercase labels to about 0.18em. It is the receipt voice — use it where the system is speaking.

IF THE FONTS ARE UNAVAILABLE

Fall back to the system stack in this order: Sora → system-ui → Segoe UI → Helvetica. Do not substitute a different display face on a whim; a wrong headline font undoes the mark faster than a wrong colour.

05 · GETTING IT WRONG

Six things not to do

Every one of these has happened to a logo somewhere. Each takes ten seconds to do and quietly costs the brand its consistency.

Don't stretch it
Scale proportionally, always. Hold shift.

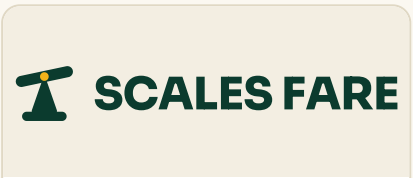

Don't recolour it
Green, coconut, solid black or solid white. Nothing else.

Don't tilt it
The beam is already at an angle. That is the whole idea.

Don't drop it on a busy or close-toned ground
Use the reversed file on dark.

Don't crowd it
Keep the clear space on page 3, even in a tight header.

Do just use the file
Every lockup you need is already drawn. Nothing needs rebuilding.

ALSO, PLEASE

Do not add a drop shadow, an outline, a gradient, or a second colour to the wordmark. Do not typeset the name yourself in place of the wordmark. Do not put the symbol inside another shape — the tile file already does that properly.

06 · THE FILES

What is in the folder

Vector SVG is the master for everything. The PNGs are conveniences for places that will not take a vector — reach for the SVG first, every time.

FILE	USE IT FOR
`scalesfare-logo-horizontal.svg`	The default. Light backgrounds.
`…-horizontal-reversed.svg`	Dark and photographic backgrounds.
`…-horizontal-tagline.svg`	First impressions — stationery, a stand, a cover.
`scalesfare-logo-stacked.svg`	Square and narrow spaces.
`…-stacked-reversed.svg`	The same, on dark.
`scalesfare-logo-mono-black.svg`	One-colour print, fax, engraving, stamps.
`scalesfare-logo-mono-white.svg`	Knockouts out of any single dark colour.
`scalesfare-symbol.svg`	The mark on its own.
`scalesfare-symbol-tile.svg`	App icon, social avatar, profile picture.
`scalesfare-wordmark.svg`	Rare. Where the symbol already appears nearby.
`favicon.svg · .ico · -32.png`	Browser tabs.
`apple-touch-icon.png`	Saved to a phone home screen.
`*.png`	Word, PowerPoint, and anything that refuses SVG.

NEED SOMETHING NOT IN HERE?

A one-colour foil, an embroidery file, a vehicle wrap at scale, a large-format print — ask rather than redraw. All of it comes off the same vector in minutes.

TYPE CREDIT

Sora and Inter are licensed under the SIL Open Font License; JetBrains Mono under the Apache License 2.0. Free to use commercially, including in the wordmark outlines.
